

Think automation - Think Harvestore

Allen & Rob Wynja and families

Thinking we could save money, we purchased and installed a refurbished GOLIATH unloader (through an after market company) in our 25' x 80' HARVESTORE. It was very costly for us and resulted in premature chain wearouts and downtime.

In June 2013, we installed a new HARVESTORE XL unloader. We have seen great time savings - almost 2 1/2 hours off our feeding times. "One of the best investments made on our farm!"

XL UNLOADER and HARVESTORE

"One of the BEST investments made on our farm" Allen Wynja

EXPECT EXTRA LARGE PERFORMANCE

Capable of moving more than 200 pounds per minute of 50% moisture haylage, the Harvestore XL 200 has a 25-horsepower variable speed direct drive compared to a 10-horsepower belt drive used in previous unloaders. This additional horsepower gives the XL 200 a cutter chain running force of 4,900 pounds versus only 1,800 pounds for the old Alliance unloader. At that speed, farmers have a viable option to unload haylage as fast or faster than they can from a plastic silo bag or a concrete bunker.
